COST-EFFECTIVE

- Access to specialised PhD expertise
- Use for controlled practice growth
- Suitable for short-term skill needs
- Eligible for R&D Tax Incentive & Innovation Vouchers (if applicable)

RAPID RESULTS

- Short, intensive 3 - 5 month projects for quick implementation of results
- Quick-turnaround on establishment
- Responsive to changing business needs & priorities

HASSLE FREE

- IP stays with company
- No employment requirements
- Pre-approved contract
- Simple and transparent model
- AMSI Intern proven and trusted

IMPROVED RESULT

Supply chain within a logistics company needed improvement to prevent loss of resources and improve efficiency at various stages in the pipeline. An initial \$2.5m cost estimate by technical consultants proposed only 60% loss recovery prompting the company to source a better solution.

Two final year PhD computer science students—matched through the AMSI Intern program and guided by academic mentors—used their specialised skills to develop an innovative solution to recover 100% of losses for only \$160k; a fraction of the cost of the initial proposal.

What seemed like a wildcard option resulted in a discipline-based, cost-effective and real solution.
