

# maths:

make your career count

## Apprentice Chef Ashlie Manganaro

“ Mathematics is used by chefs in lots of different ways and the demand for maths increases the further you go in the business.

We need to calculate portion sizes using measurement and conversion. We always do a cost-price analysis using fractions and percentages to make sure that the produce we buy from the markets is costed accurately.

Maths gives you the building blocks for your career and having maths at a reasonable level gives you a competitive advantage over the next person.
