make your career count

Equine Industry Student

Naomi White

“ Working with horses, we use mathematics every day. In organising the food for a horse, our starting point is to know what the horse weighs. We use ratios to make sure the horse has a well-balanced diet. When preparing for competition, all of the measurements for the course need to be accurate and there is a lot of geometry involved in designing the jumps.

In the equine industry, more opportunities will open up to you the further you pursue mathematics.

”
Brian Hodgson,
Equine Centre Manager
