

ACE Network Subject Information Guide

Mathematical Epidemiology

Semester 2, 2023

Administration and contact details

Host department	School of Science (Mathematical Sciences)
Host institution	RMIT University
Name of lecturer	Associate Professor Stephen Davis
Phone number	03 9925 2278/0404 35 1812
Email address	stephen.davis@rmit.edu.au
Homepage	https://www.rmit.edu.au/staff/profile?id=stephen.davis
Name of honours coordinator	Associate Professor Stephen Davis
Phone number	03 9925 2278/0404 35 1812
Email address	stephen.davis@rmit.edu.au
Name of masters coordinator	
Phone number	
Email address	

Subject details

Handbook entry URL	NA
Subject homepage URL	NA
Honours student hand-out URL	NA
Teaching period (start and end date):	Monday 24 July, 2023
Exam period (start and end date):	Friday 20 October, 2023
Contact hours per week:	Two 1-hour lectures + 3 hours independent study
ACE enrolment closure date:	
Lecture day(s) and time(s):	Monday 11am – 12pm, Friday 11am – 12pm
Description of electronic access arrangements for students (for example, LMS)	Course materials will be shared via DropBox; lectures and lectorials will have dual delivery face to face at the RMIT city campus (the Access Grid Room) and Zoom. Students living in Melbourne or nearby are all welcome to come on campus for the face-to-face teaching, regardless of whether you are an RMIT student.

Subject content

1. Subject content description

This course will immerse students in the epidemic theory that underpins our management of infectious diseases of humans and animals, including of course the ongoing global pandemic caused by the SARS-CoV-2 virus. The course will cover simple models for closed populations of hosts, compartment models, multi-host pathogens, spatial dynamics, within-host dynamics and the type reproduction number.

2. Week-by-week topic overview

RMIT Week	Topics covered	Sections of the Lecture Notes	Paper
1	-		-
2	R_0 ; r ; doubling time	1.1 -- 1.1.5	How will country-based mitigation measures influence the course of the COVID-19 epidemic?
3	SIR model; final size equation	1.2 -- 1.2.1	Appendices of How will country-based mitigation measures influence the course of the COVID-19 epidemic?
4	Solving the SIR model; SIR model with births and deaths; stability analysis	1.2.2 --1.2.3, 2.1--2.2.3	Key questions for modelling Covid-19 exit strategies
5	Mean age at infection; SEI model for canine rabies	2.2.4	Synchronous cycles of domestic dog rabies in sub-Saharan

			Africa and the impact of control efforts
6	Probability of extinction; the dispersion parameter k ; heterogeneity and superspreaders	3	Superspreading and the effect of individual variation on disease emergence
Mid-Semester Break			
7	Multi-host disease systems; Next Generation Matrix	4.1--4.2	The Basic Reproduction Number for Complex Disease Systems: Defining R_0 for Tick-Borne Infections
8	Type reproduction number; NGM recipe for compartment models	4.3--4.4	A new method for estimating the effort required to control an infectious disease
9	Waning immunity	None	Pertussis models to inform vaccine policy
10	Seasonality; Cyprinid Herpes Virus 3	5.1 -- 5.2.2	An epidemiological model of koi herpesvirus (KHV) biocontrol for carp in Australia
11	Spatial spread; percolation; plague in Kazakhstan	6.1 -- 6.4.3	The two main papers on the Kazakhstan plague system - Davis et al. (2005) & Davis et al. (2008).
12	Within-host infection dynamics	Review article by Jane Heffernan.	Should we expect population thresholds for wildlife disease?

13	Models of Mosquito-borne disease	None	Models of malaria, dengue fever, JEV and other arboviruses.

3. Assumed prerequisite knowledge and capabilities

Students will be assumed to be familiar with systems of differential equations and the techniques used to analyse their behaviour and dynamics; it is advantageous to have completed an undergraduate course in differential equations or modelling with differential equations.

It is also assumed that students are comfortable with writing/modifying code in one or more programming environments such as R or Matlab.

4. Learning outcomes and objectives

Students will acquire a working knowledge of the mathematical techniques used to generate insight into biological systems. They will gain experience in translating the known biological properties of a system into a set of mathematical equations (a model) and vice versa be able to interpret equations in terms of the biology they capture. Students will be able to use epidemiological reasoning to characterise a pathogen in terms of its basic reproduction ratio and understand the usefulness and limitations of this quantity. Students will be able to numerically solve systems of differential equations to explore their behaviour and dynamics and draw biological conclusions.

AQF specific Program Learning Outcomes and Learning Outcome Descriptors (if available):

AQF Program Learning Outcomes addressed in this subject	Associated AQF Learning Outcome Descriptors for this subject
Problem Solving - You will have the ability to apply knowledge and skill to characterise, analyse and solve a wide range of problems.	<p>S1: cognitive skills to review, analyse, consolidate and synthesise knowledge to identify and provide solutions to complex problem with intellectual independence</p> <p>S2: cognitive and technical skills to demonstrate a broad understanding of a body of knowledge and</p>

	<p>theoretical concepts with advanced understanding in some areas</p> <p>A2: to adapt knowledge and skills in diverse contexts</p>
--	--

Learning Outcome Descriptors at AQF Level 8

Knowledge

K1: coherent and advanced knowledge of the underlying principles and concepts in one or more disciplines

K2: knowledge of research principles and methods

Skills

S1: cognitive skills to review, analyse, consolidate and synthesise knowledge to identify and provide solutions to complex problem with intellectual independence

S2: cognitive and technical skills to demonstrate a broad understanding of a body of knowledge and theoretical concepts with advanced understanding in some areas

S3: cognitive skills to exercise critical thinking and judgement in developing new understanding

S4: technical skills to design and use in a research project

S5: communication skills to present clear and coherent exposition of knowledge and ideas to a variety of audiences

Application of Knowledge and Skills

A1: with initiative and judgement in professional practice and/or scholarship

A2: to adapt knowledge and skills in diverse contexts

A3: with responsibility and accountability for own learning and practice and in collaboration with others within broad parameters

A4: to plan and execute project work and/or a piece of research and scholarship with some independence

5. Learning resources

- Lecture notes, recommended journal articles and recommended books will be made available over the course of the semester.

7. Assessment
