ACE Network Subject Information Guide

Mathematical Epidemiology

Semester 2, 2024

Administration and contact details

Host Department	School of Science (Mathematical Sciences)
Host Institution	RMIT University
Name of lecturer	Associate Professor Stephen Davis
Phone number	03 9925 2278/0404 35 1812
Email Address	stephen.davis@rmit.edu.au
Homepage	https://www.rmit.edu.au/staff/profile?id=stephen.davis
Name of Honours coordinator	Associate Professor Stephen Davis
Phone number	03 9925 2278/0404 35 1812
Email Address	stephen.davis@rmit.edu.au

Subject details

Handbook entry URL	NA
Subject homepage URL	NA
Honours student hand-out URL	NA
Start date:	Monday 29th of July, 2024
End date:	Tuesday 22nd of October, 2024
Contact hours per week:	Two 1-hour lectures + 3 hours independent study
Lecture day and time:	Monday 1pm – 2pm, Tuesday 1pm – 2pm
Description of electronic access arrangements for students (for example, WebCT)	Course materials will be shared via DropBox; lectures and lectorials will have dual delivery face to face at the RMIT city campus (the Access Grid Room) and Zoom. Students living in Melbourne or nearby are all welcome to come on campus for the face-to-face teaching, regardless of whether you are an RMIT student.

Subject content

1. **Subject content description**

This course will immerse students in the epidemic theory that underpins our management of infectious diseases of humans and animals, including of course the ongoing global pandemic caused by the SARS-CoV-2 virus. The course will cover simple models for closed populations of hosts, compartment models, multi-host pathogens, spatial dynamics, within-host dynamics and the type reproduction number.

2. Week-by-week topic overview

RMIT Week	Week starting (Monday)	Topics covered	Sections of the Lecture Notes
1	22 July 2024	-	
2	29 July 2024	R0; r; doubling time	1.1 -- 1.1.5
3	5 August 2024	SIR model; final size equation	1.2 -- 1.2.1
4	12 August 2024	Solving the SIR model; SIR model with births and deaths; stability analysis	1.2.2 --1.2.3, 2.1--2.2.3
5	19 August 2024	Mean age at infection; SEI model for canine rabies	2.2.4
6	26 August 2024	Probability of extinction; the dispersion parameter k; heterogeneity and superspreaders	3
Mid-Semester Break			

7	9 September 2024	Multi-host disease systems; Next Generation Matrix	4.1--4.2
8	16 September 2024	Type reproduction number; NGM recipe for compartment models	4.3--4.4
9	23 September 2024	Waning immunity	-
10	30 September 2024	Seasonality; Cyprinid Herpes Virus 3	5.1 -- 5.2.2
11	7 October 2024	Spatial spread; percolation; plague in Kazakhstan	6.1 -- 6.4.3
12	14 October 2024	Within-host infection dynamics	-
13	21 October 2024	Models of Mosquito-borne disease	-

3. Assumed prerequisite knowledge and capabilities

Students will be assumed to be familiar with systems of differential equations and the techniques used to analyse their behaviour and dynamics; it is advantageous to have completed an undergraduate course in differential equations or modelling with differential equations.

It is also assumed that students are comfortable with writing/modifying code in one or more programming environments such as R or Matlab.

4. Learning outcomes and objectives

Students will acquire a working knowledge of the mathematical techniques used to generate insight into biological systems. They will gain experience in translating the known biological

properties of a system into a set of mathematical equations (a model) and vice versa be able to interpret equations in terms of the biology they capture. Students will be able to use epidemiological reasoning to characterise a pathogen in terms of its basic reproduction ratio and understand the usefulness and limitations of this quantity. Students will be able to numerically solve systems of differential equations to explore their behaviour and dynamics and draw biological conclusions.

AQF specific Program Learning Outcomes and Learning Outcome Descriptors (if available):

AQF Program Learning Outcomes addressed in this subject	Associated AQF Learning Outcome Descriptors for this subject
Problem Solving - You will have the ability to apply knowledge and skill to characterise, analyse and solve a wide range of problems.	**S1: cognitive skills to review, analyse, consolidate and synthesise knowledge to identify and provide solutions to complex problem with intellectual independence** **S2: cognitive and technical skills to demonstrate a broad understanding of a body of knowledge and theoretical concepts with advanced understanding in some areas** **A2: to adapt knowledge and skills in diverse contexts**

Learning Outcome Descriptors at AQF Level 8
Knowledge
K1: coherent and advanced knowledge of the underlying principles and concepts in one or more disciplines
K2: knowledge of research principles and methods
Skills
S1: cognitive skills to review, analyse, consolidate and synthesise knowledge to identify and provide solutions to complex problem with intellectual independence
S2: cognitive and technical skills to demonstrate a broad understanding of a body of knowledge and theoretical concepts with advanced understanding in some areas
S3: cognitive skills to exercise critical thinking and judgement in developing new understanding
S4: technical skills to design and use in a research project
S5: communication skills to present clear and coherent exposition of knowledge and ideas to a variety of audiences
Application of Knowledge and Skills
A1: with initiative and judgement in professional practice and/or scholarship
A2: to adapt knowledge and skills in diverse contexts
A3: with responsibility and accountability for own learning and practice and in collaboration with others within broad parameters
A4: to plan and execute project work and/or a piece of research and scholarship with some independence

5. Learning resources

Lecture notes, recommended journal articles and recommended books will be made available over the course of the semester.

6. Assessment

Exam/assignment/classwork breakdown					
Exam	40%	Assignment	20%+20%+20%	Class work	-
Assignment due dates		28/08/2023	25/09/2023	23/10/2023	
Approximate exam date				28/10/2023—31/10/2023	

Institution Honours program details

Weight of subject in total honours assessment at host department	12.5%
Thesis/subject split at host department	37.5% thesis/62.5% course work
Honours grade ranges at host department:	
H1	80-100 %
H2a	75-79 %
H2b	70-74 %
H3	65-69 %
